

PUMA

CIRC Lessons Learned

1. Scientists don't want to just be data providers, but want to make sure that data is used properly
2. PWB really wanted to understand the data and the analysis (refreshing!)
3. Scientists really wanted to understand how the data was going to impact decision making in 'real life'
4. There are things that scientists can do to help that may seem little, but are invaluable (like preparing PRMS input data files)
5. After all of our conversations and documents, PWB seemed to have a very good idea on how and how not to use climate data and we were impressed with their analysis
