What are invasive species?

- *Non-native in origin*
- *A pest (competes with humans for resources)*
- *Catastrophic to environment/economies*

Native

Invaders

Non-native

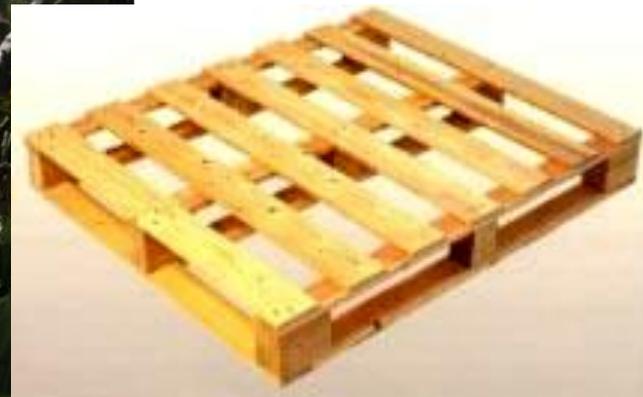

Hypothetical community

How do forest invasive species get here?

1. Live plant trade (~70% of species)
2. Wood packing material (~25% of species)

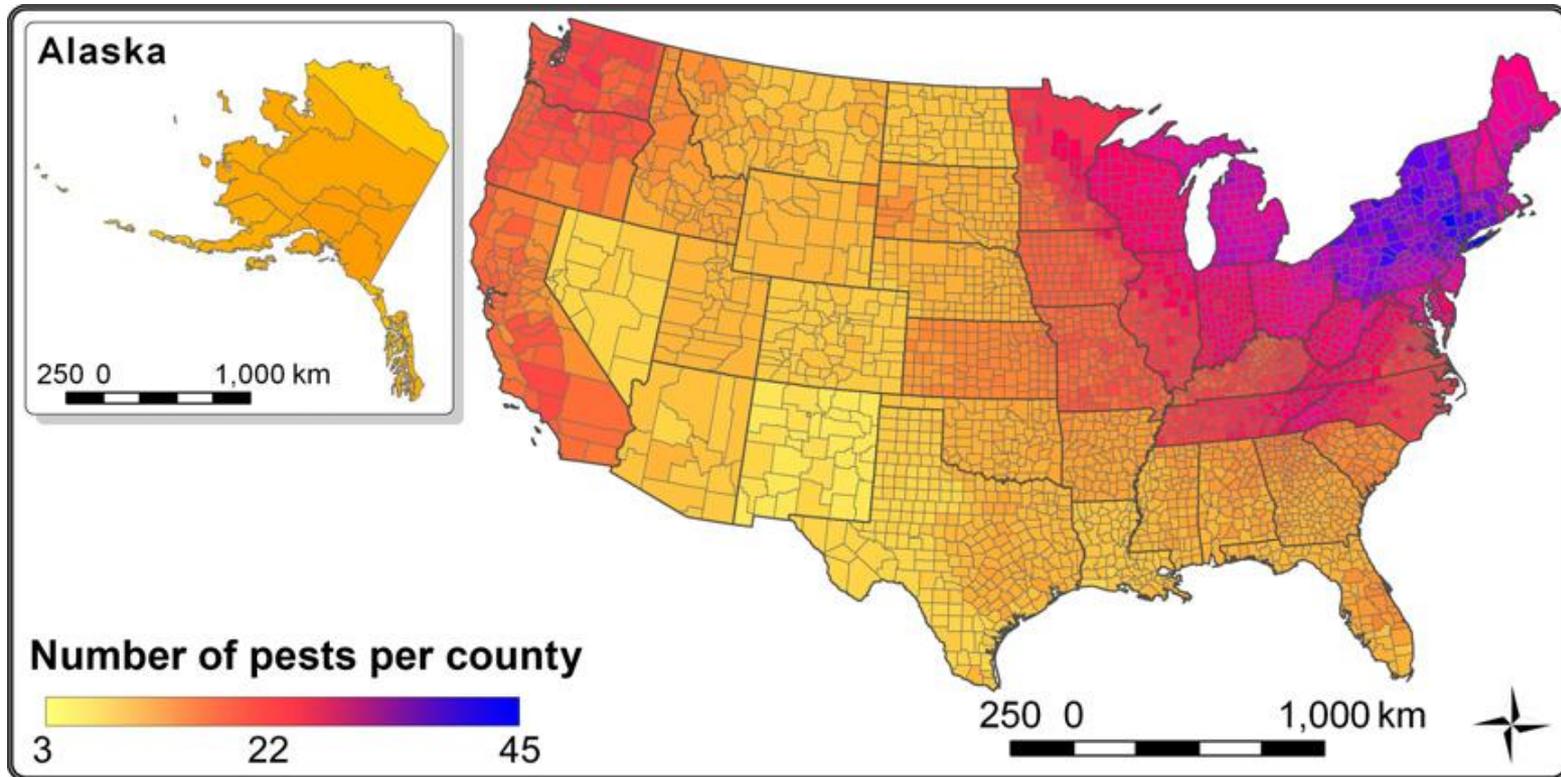

REVIEWS REVIEWS REVIEWS

Live plant imports: the major pathway for forest insect and pathogen invasions of the US

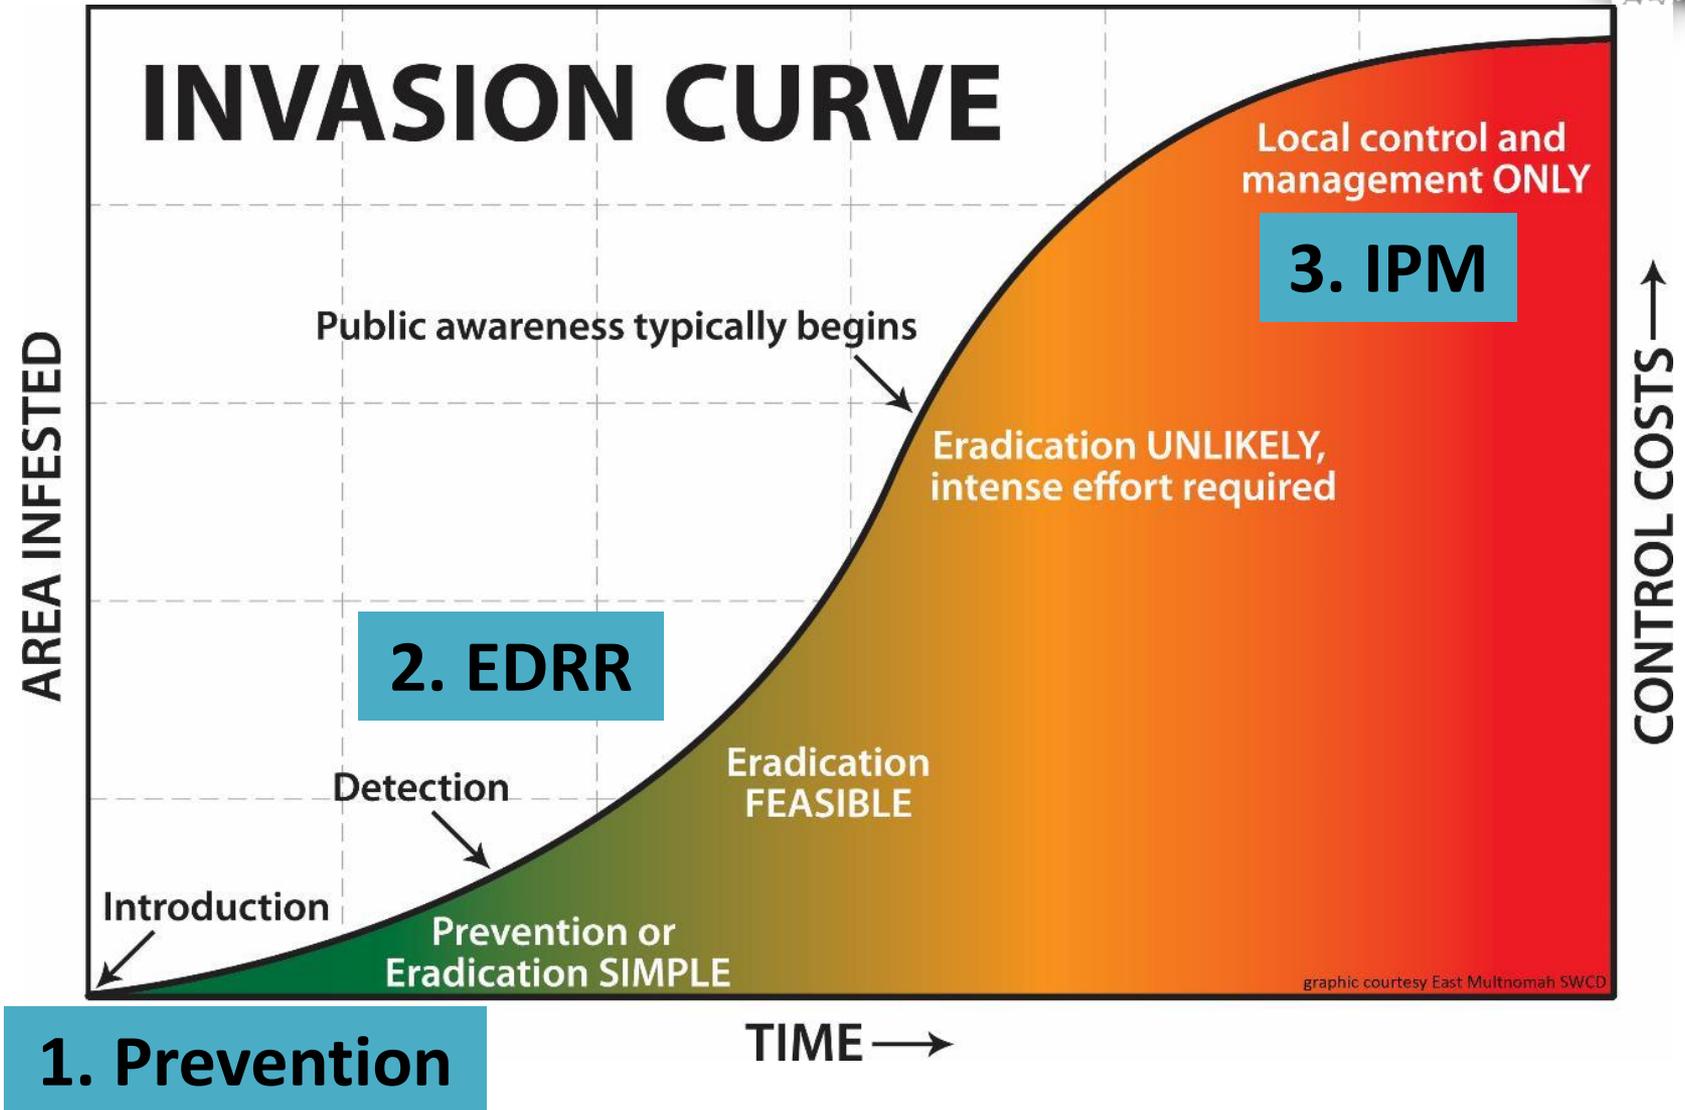

Andrew M Liebhold^{1*}, Eckehard G Brockerhoff², Lynn J Garrett³, Jennifer L Parke⁴, and Kerry O Britton⁵

Distribution of exotic forest pests

- Over 450 non-native forest insect species are established in U.S. (Liebhold et al. 2013)

What can we do about invasive species?

Additional Resources

Partners

- Goal: Train professionals how to identify key invasive pests
- Early detection = better chance of eradication or containment

Oregon Forest Pest Detectors

Six online modules – 1.5 hour total:

1. Invasive species overview
2. Emerald Ash borer
3. Asian Longhorn beetle
4. Goldspotted oak borer
5. Asian gypsy moth
6. Reporting invasive species

For more information or to take the free class,

[Tips for reporting >>](#)

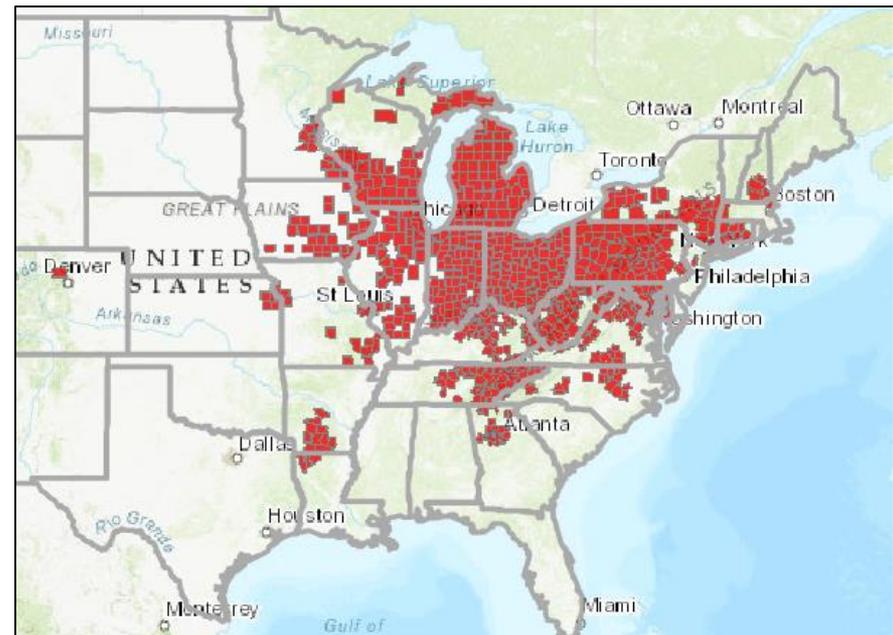

Emerald Ash Borer (EAB)

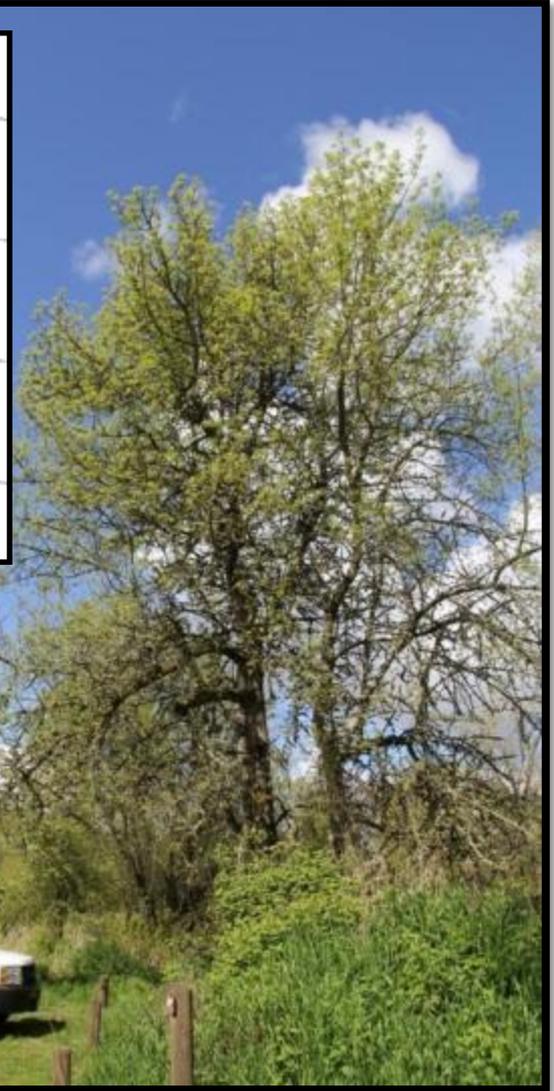

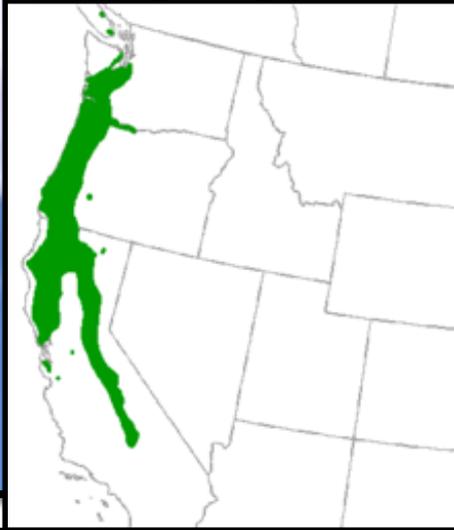

- First detected in U.S., 2002
- 100+ million trees killed in 30 states since 1990s
- Several ash species at risk
- Ecosystem effects

EAB in the U.S.

Oregon Ash – a widespread and common tree in Oregon, California, and Washington.

Oregon Emerald Ash Borer Risk Map

Oregon Campgrounds

Risk Sites

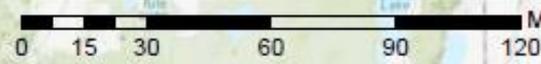

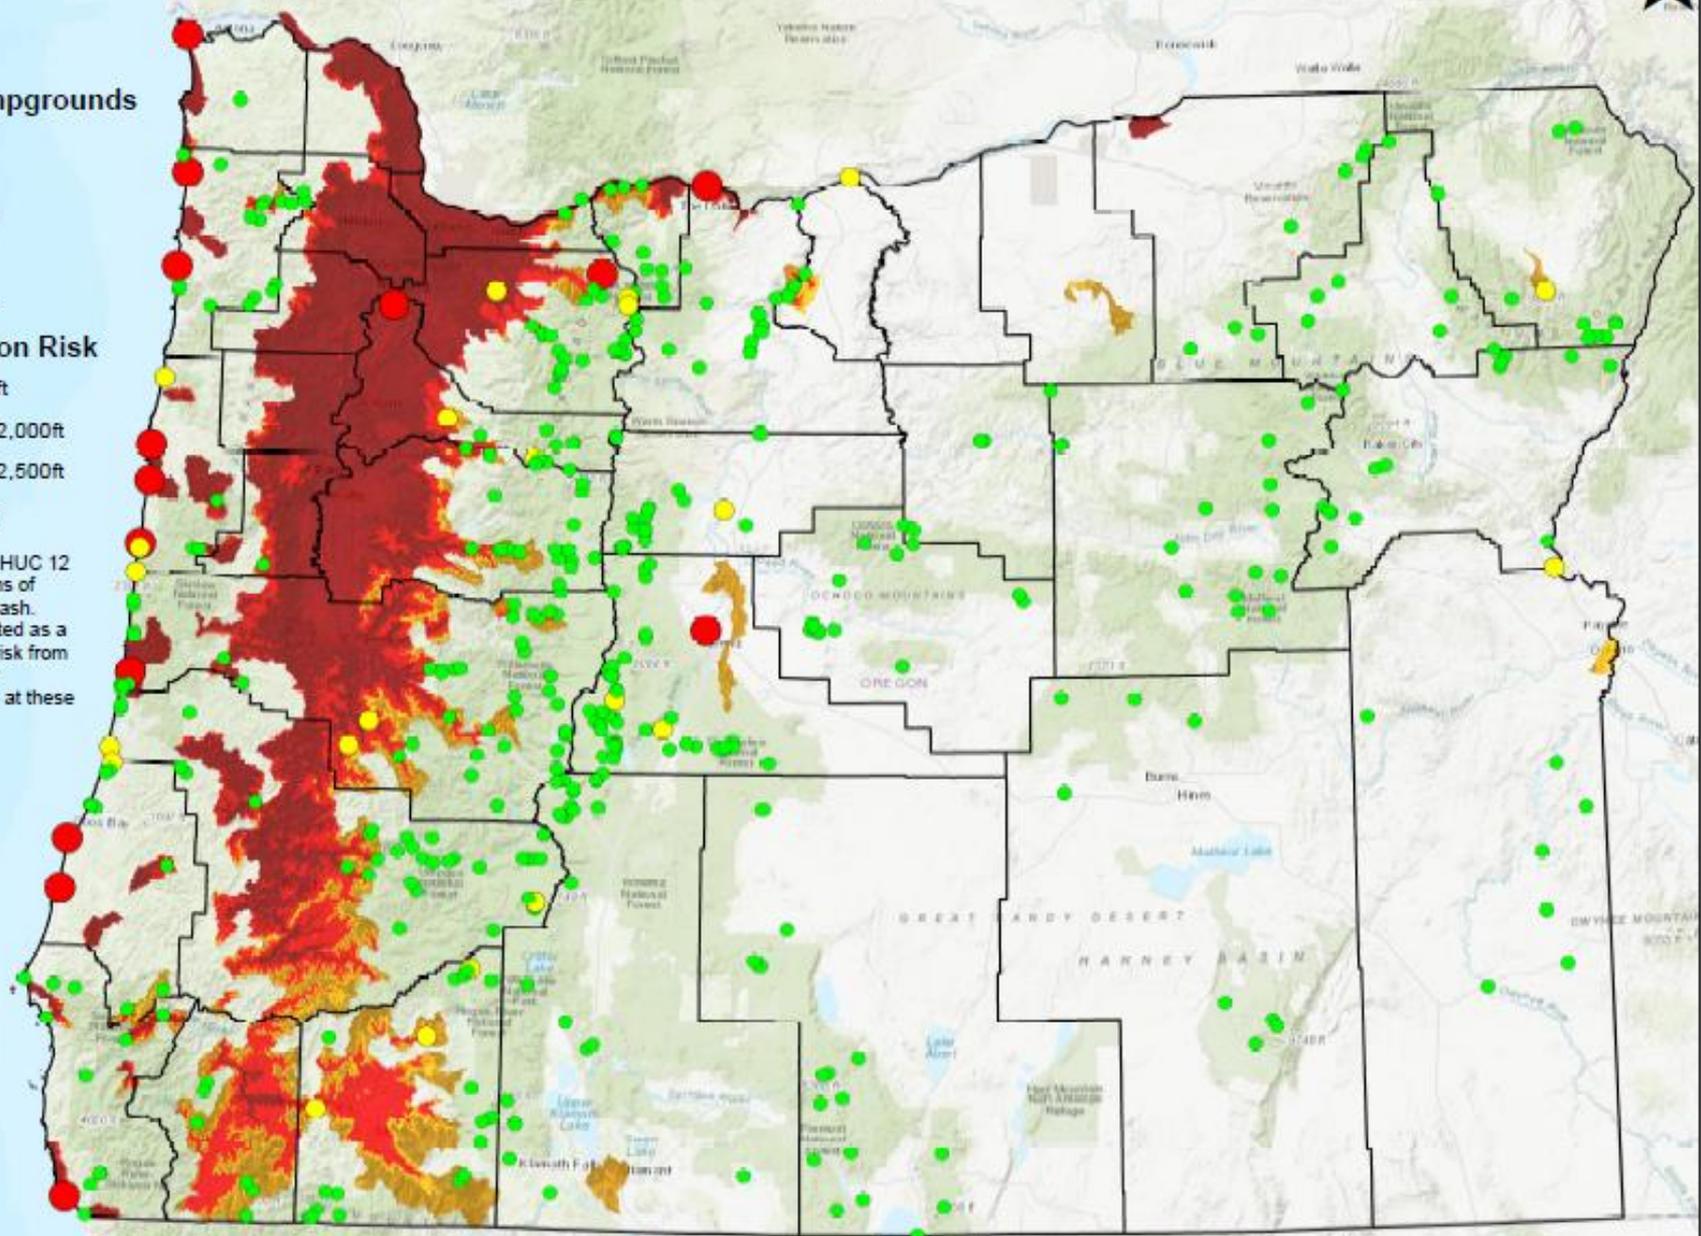

- 500 +
- 100-500
- 0-100

Counties

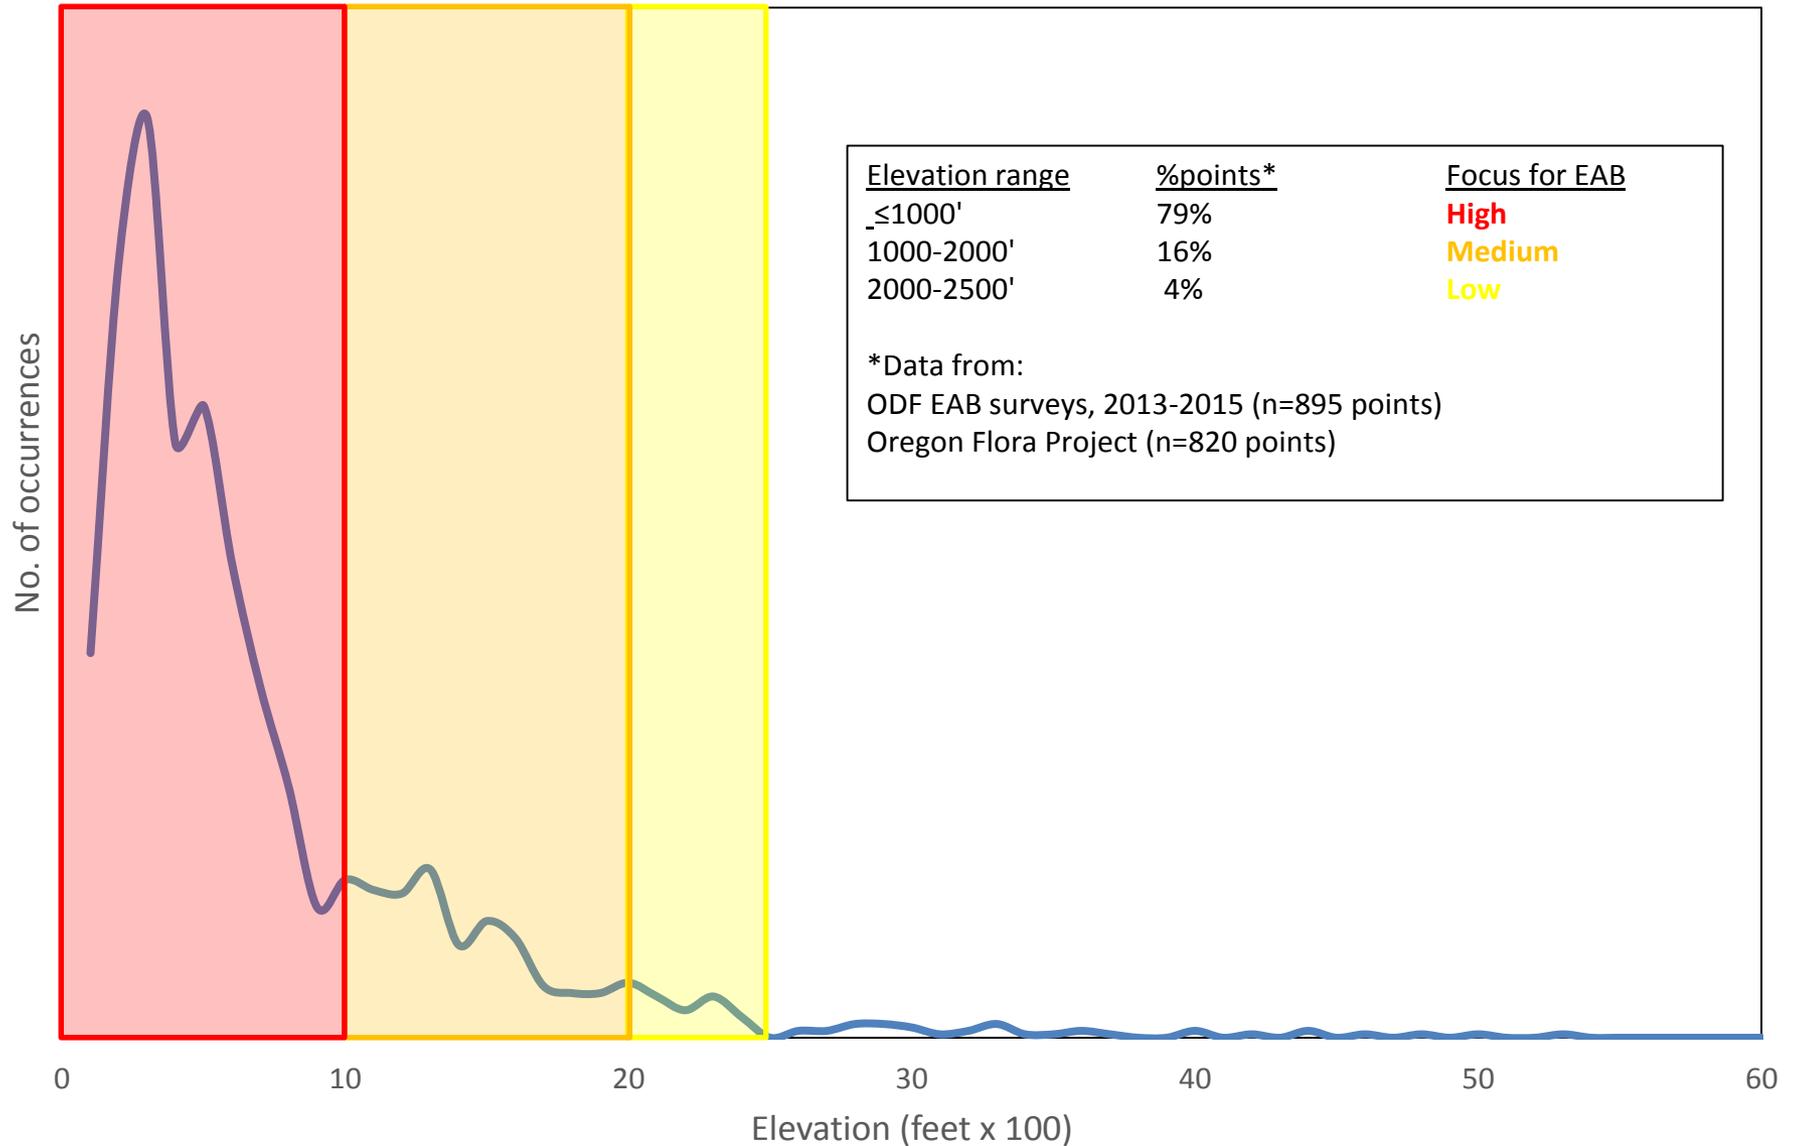

EAB Elevation Risk

- 0 - 1,000ft
- 1,000ft - 2,000ft
- 2,000ft - 2,500ft
- > 2,500ft

Representation of HUC 12 watershed locations of Oregon and other ash. Elevation is indicated as a representation of risk from EAB due to higher populations of ash at these elevations.

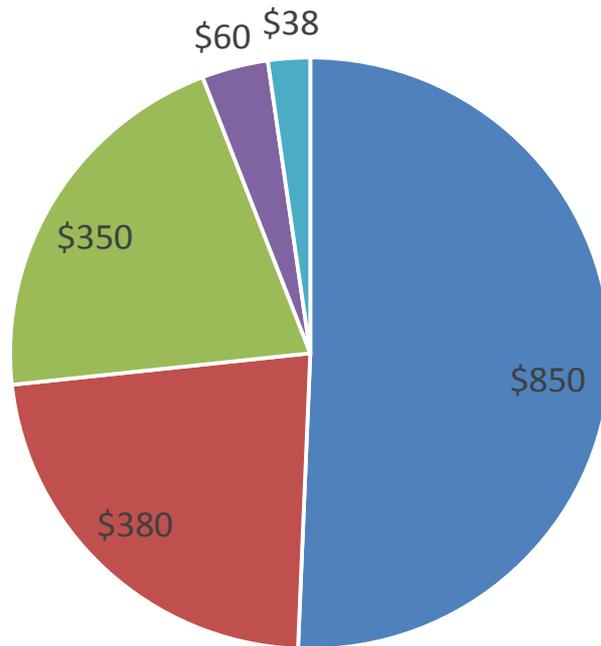

Frequency distribution of Oregon ash by elevation

Hold onto your Ash!

Costs of EAB in millions \$, as of 2011*

- Local government
- Property value losses
- Landowner costs
- Timber industry
- Federal government

City of Portland Street Tree Inventory

4.8% or 72,000 public ash
\$21M removal (\$290/tree)
\$28M replacement (\$387/tree)
\$49M total cost to PDX

Invasive woodborer survey

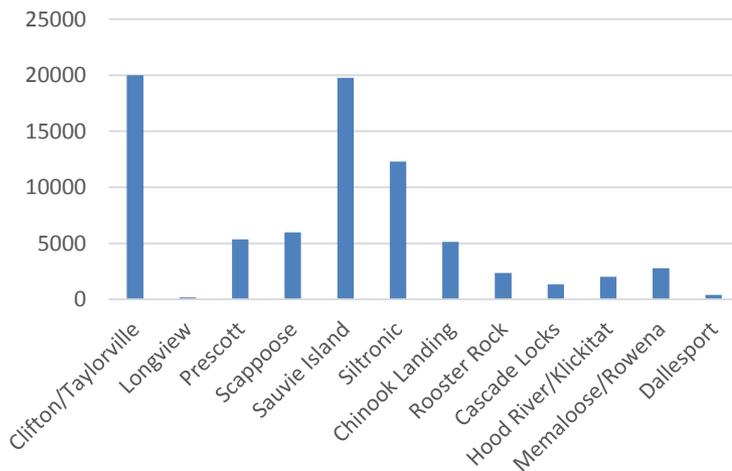

8 trap types per site
12 sites
8 sample periods, Apr-Sept
=768 samples per year

Invasive woodborer survey – 2016-2017 results

	Abundance	# species
Native	11,521	170
Exotic	81,437	24
Genus only	467	6
Total	93,425	200

X. saxesenii abundance by site

77,605, or 83%, of total capture:

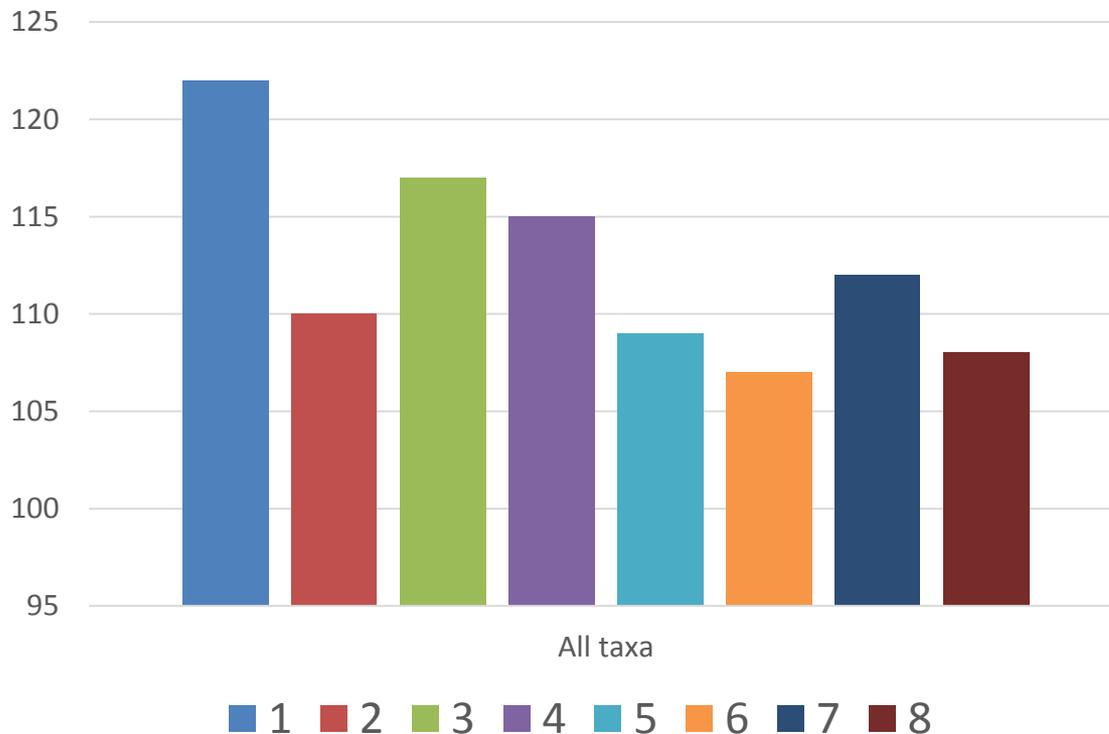

Fruit-pinhole borer (*Xyleborinus saxesenii*)

Invasive woodborer survey – 2016-2017 results

Total number of species by trap type

1. **alpha-pinene, ethanol**
2. **ethanol**
3. **Monochamus lure set**
4. **Exotic Ips lure set**
5. **Oak pinhole lure set**
6. **Pine shoot beetle lure set**
7. **Control (no lure)**
8. **Green leaf volatiles**

New exotic species detected

Longview, WA; June 15, 2017

Native to eastern North America

First record on west Coast

Hosts: Oak, chestnut

Chrysobothris rugosiceps
(Cerambycidae)

J. Basham

New exotic species detected

Rooster Rock; May 24, 2017

Native to Asia

First record in western North America

Hosts: Alder, maple, oak, chinkapin

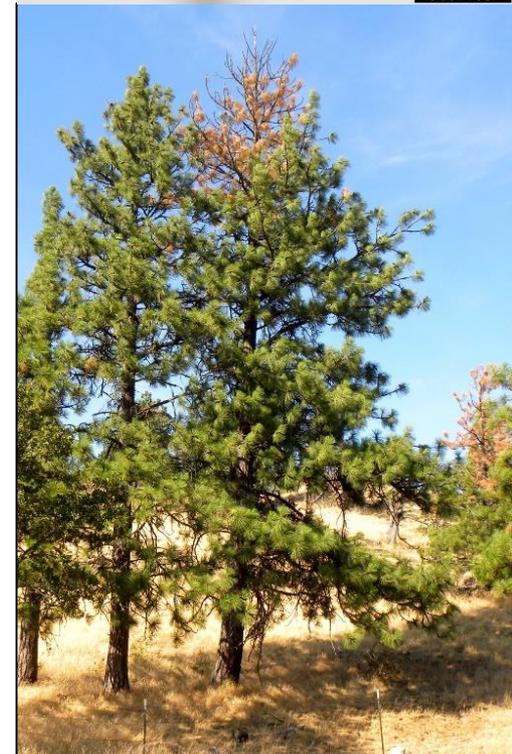

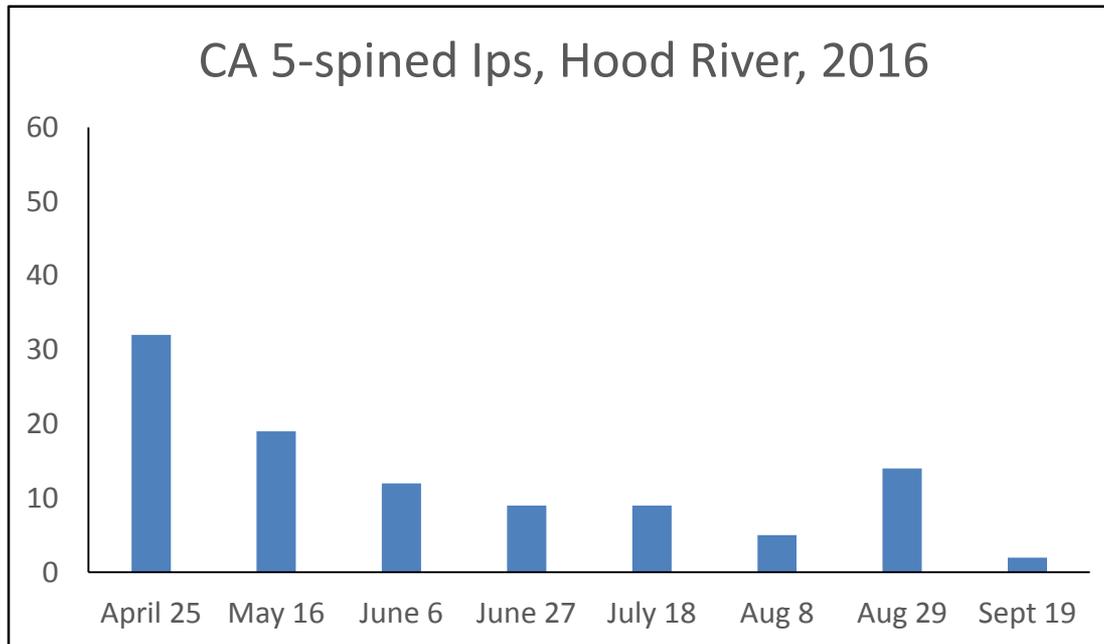

Cyclorhipidion pelliculosum
(Curculionidae: Scolytinae)

Pest and Diseases Images Library, Bugwood.org

Providing info on native forest insects

Oregon gypsy moth update

2016 gypsy moth eradication site
(green polygon: 8,674 acres) in
Portland/Vancouver.

Source: Oregon Dept. Agriculture

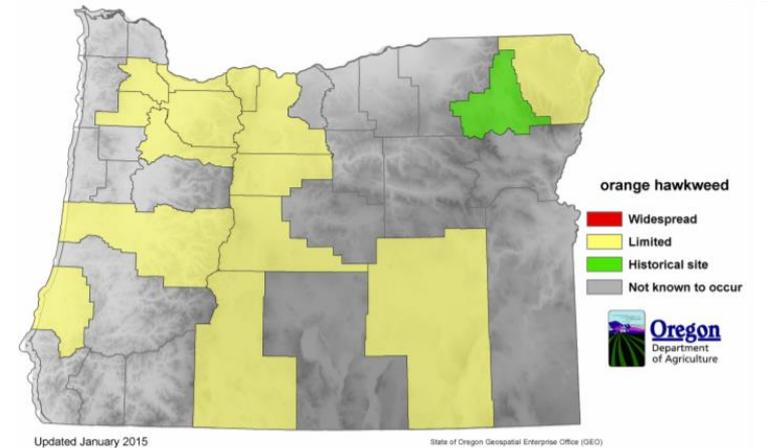

- **100% success** in eradicating gypsy moth
- Enormous benefits to Oregon's economy
- Vast amounts of pesticides not being applied in PNW

2017 Gypsy moth report (From ODA):

- 15,135 traps deployed
- No AGM
- No GM from 2016 eradication site
- EGM in 2017: Multnomah Co. (3); Benton Co. (5); Lane Co. (2); Josephine Co. (1)

Orange hawkweed (*Hieracium aurantiacum*)

Oregon Dept. of Agriculture

- Detected in Clatsop Co, 2017
- Class A noxious weed (ODA)
- Perennial
- Rhizomes, stolons, seeds
- Adapted to disturbance
- Surveys on Clatsop SF, 2018

Gorse (*Ulex europaeus*)

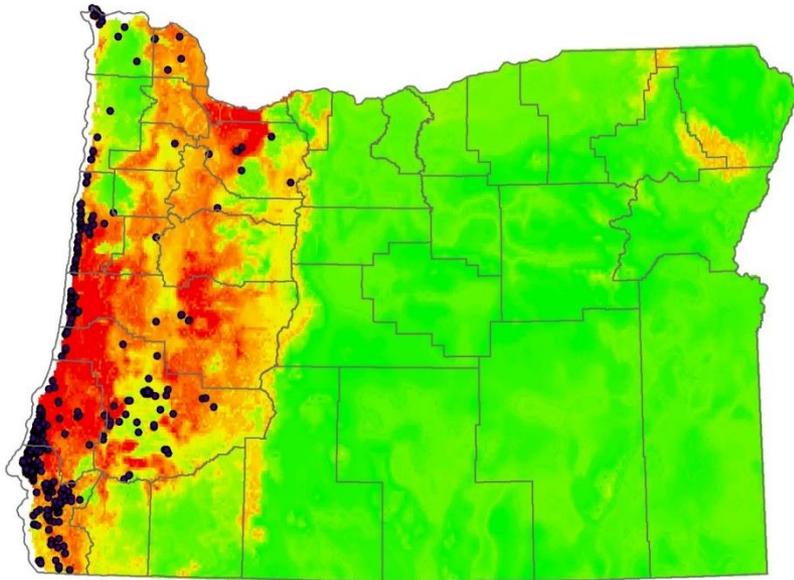

- Bandon, OR 1873
- Related to Scotch broom
- “List B” noxious weed

Gorse: costs, distribution

First in Oregon: 1873

Current acres, costs:	
28,000 acres	\$441,000
Total susceptible:	
16.6 million acres	\$206 million
Percent of potential:	
0.2% acres occupied	0.2% costs realized

Map Key

- Mapping, Best Management recommendations, Education/Outreach, FireWise, Hwy 101 Demo project
- Next meeting: March 12, 9-noon, Bandon

Invasive species threaten sustainable forestry

W OR Total harvest by tree species, 1987-2007

Forestry: \$5.2 billion GDP in Oregon
Are we ready for next invasive species?

Thank you for listening!

- Invasive species will continue to affect Oregon's forests
- Prevention and EDRR are keys to success
- Collaboration required to meet challenges
